Introduction

In Mobily, Telflow plays the role of Product Order Manager (POM) orchestrating the orders for FTTH and Fixed Voice service. During order processing, for example, the provisioning requests are sent to downstream systems and the responses are handled asynchronously via notifications (TMF / Bespoke).

Scope

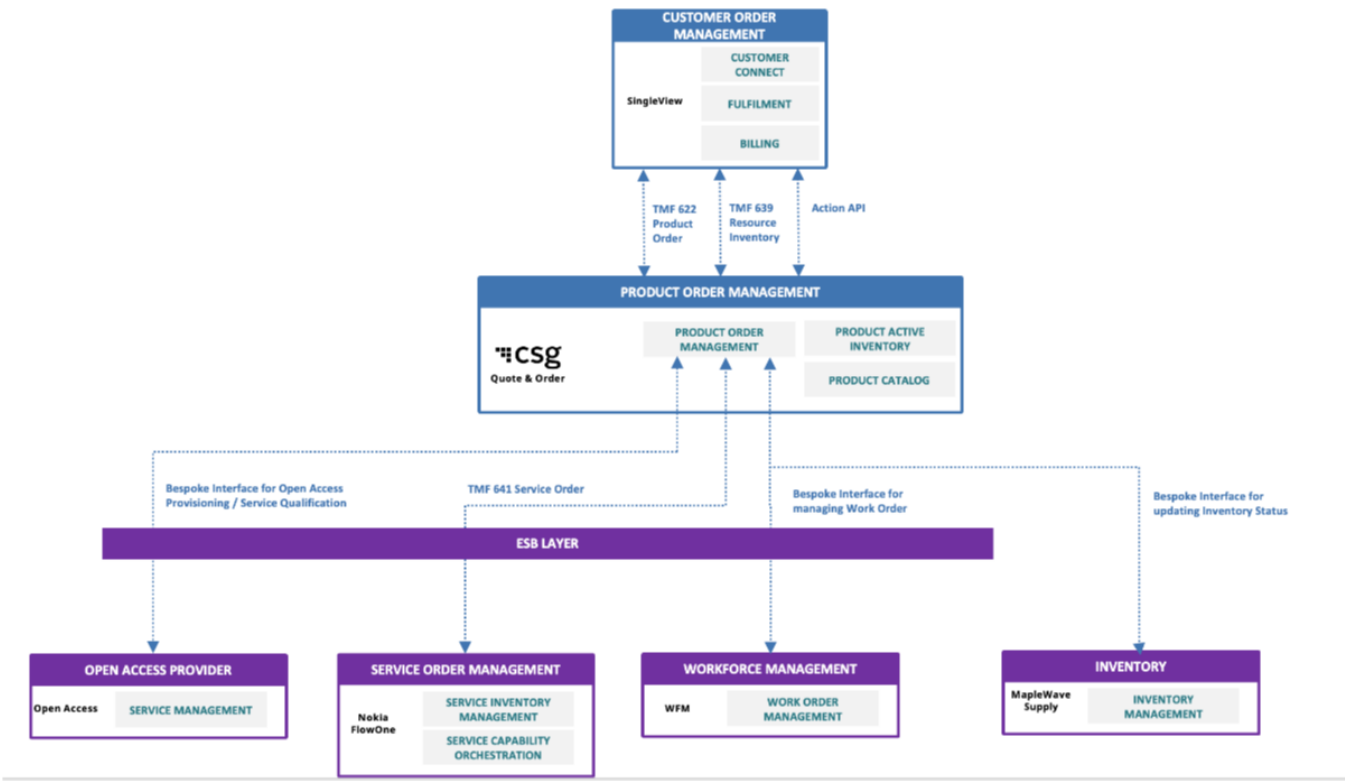

This document describes the notification event API details that are to be implemented in Telflow.

Integration Overview

Note:

This document doesn't cover the SingleView integration.

Systems and Integration Details

S.No	System / Application	Integration	Via ESB?
1	Nokia FlowOne	TMF 641	Yes
2	Open Access	Bespoke	Yes
3	WFM	Bespoke	Yes

API Notifications

1. A callback URL must be registered as a listener in the external system to send the notification events to the Telflow.
2. Telflow acknowledges the reception of the notification with the HTTP code 200.
3. REST is the supported interface.

Telflow Callback URL

S.No	System / Application	Callback URL	Method
1	Nokia FlowOne	https://<hostname>/tmf-api/serviceOrderingManagement/v1/notification/	POST
2	Open Access	https://<hostname>/serviceInstallationManagement/v1/notification/	POST
3	WFM	https://<hostname>/workForceManagement/v1/notification/	POST

Authentication

The external systems must be authenticated via access token before sending the notification events to Telflow. Following are the details,

Get Access Token

URL	https://<host>/auth/realms/telflow/protocol/openid-connect/token
METHOD	POST

Request

Header:**Body: (Form URL Encoded)**

client_id = wfm-system
client_secret = <client secret>
username = mob-wfm-admin
password = <password>
grant_type = password

Response

200

```
{
  "access_token": <token>
  "expires_in": 3600,
  "refresh_expires_in": 4500,
  "refresh_token": <refresh_token>
  "token_type": "Bearer",
  "not-before-policy": 0,
  "session_state":
  "scope":
}
```

Refresh Access Token

URL	https://<host>/auth/realms/telflow/protocol/openid-connect/token
METHOD	POST

Request
Header: Body: (Form URL Encoded) client_id = wfm-system client_secret = <client secret> refresh_token = <refresh_token> grant_type = refresh_token
Response
200 <pre>{ "access_token": <token> "expires_in": 3600, "refresh_expires_in": 4500, "refresh_token": <refresh_token> "token_type": "Bearer", "not-before-policy": 0, "session_state": "scope": }</pre>

Below are the details applicable for various environments,

Environment	External System	Client Id	Client Secret	Username	Password
DEV	ESB (Nokia FlowOne, WFM, Open Access)				
SIT					
UAT					
PRE-PROD					
PROD					

Error Codes

Following are the error codes that are supported,

HTTP Response Code	Description
200	Success Request was successfully authorised and processed. The relevant entities will be returned in response.
201	Created Request was successfully authorised and processed. Creation of the requested entity has been confirmed and will be returned in response.
202	Accepted Request was successfully authorised, but not necessarily been processed. The latest state of the relevant entity will be returned in response.
204	No Content Request was successfully authorised and processed. No response required.

400	Bad Request Request data fails validation or does not conform to expected format.
401	Unauthorised User has not been authenticated.
403	Forbidden User does not have permission to access the requested resource.
404	Not Found Requested resource does not exist or is unavailable.
405	Method Not Allowed Requested operation is not supported.
500	Internal Server Error An unexpected error has occurred within the system.

Error Response
403 <pre>{ "error": "invalid_grant", "error_description": "Access token is expired" }</pre>

Use Case Journeys

The following use cases are supported in this solution release, and are each reflected by a variation of Telflow product order type (new/change/terminate).

Join & Buy

Use Case - Set 1 Regular Customer buys FTTH

- Customer buys new FTTH product via POS/Tafeely
- Customer buys new FTTH product via Digital
- Staff buys new FTTH product
