Synchronous Acknowledgement

Telflow shall initiate request to SingleView to create an action and SingleView shall return the action Id in the acknowledgement response to Telflow.

```
{
  "actionId": "1313131"
}
```

API Notifications

1. A callback URL must be registered as a listener in SingleView to send the notification events to the Telflow.
2. Telflow creates an action in SingleView and receives an acknowledgement that the action had been created with HTTP Code 201. The acknowledgment contains the action Id.
3. During action processing, a notification event of type 'ActionNotificationEvent' is generated with the latest status and notified to Telflow via the callback URL and expects HTTP Code 200 acknowledging the reception of the notification.
4. REST is the supported interface.
