Introduction

In Mobily, Telflow plays the role of Product Order Manager (POM) orchestrating the orders for FTTH and Fixed Voice service. The order shall be captured and submitted by SingleView towards Telflow for fulfilment. The interface between SingleView and Telflow is of TMF 622 compliant.

Scope

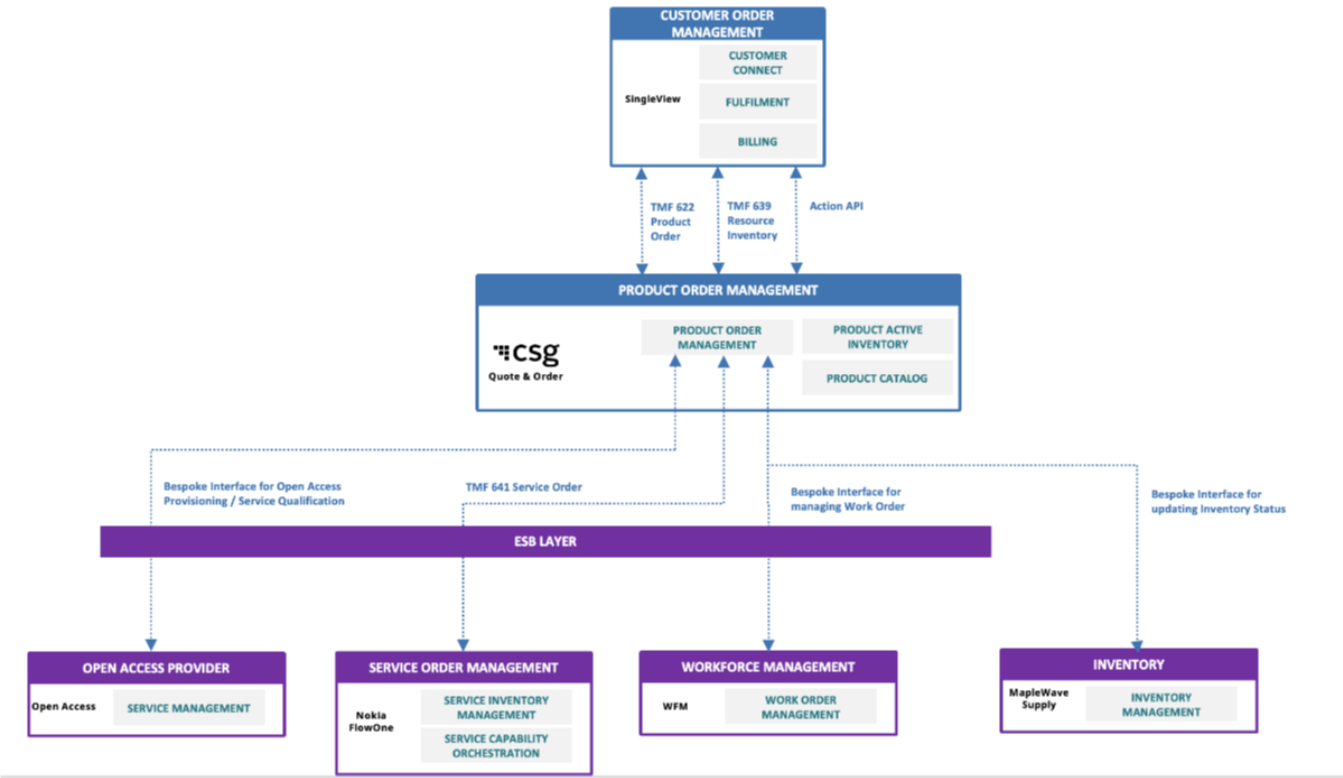

This document describes the TMF 622 interface implemented in Telflow.

Integration Overview

Authentication

Get Access Token

URL	<code>https://<host>/auth/realms/telflow/protocol/openid-connect/token</code>
-----	---

METHOD	POST
---------------	------

Request
Header:
Body: (Form URL Encoded)
client_id = singleview-system
client_secret = <client secret>
username = mob-sv-admin
password = <password>
grant_type = password
Response
200
<pre>{ "access_token": <token> "expires_in": 3600, "refresh_expires_in": 4500, "refresh_token": <refresh_token> "token_type": "Bearer", "not-before-policy": 0, "session_state": "scope": }</pre>

Refresh Access Token

URL	https://<host>/auth/realms/telflow/protocol/openid-connect/token
METHOD	POST

Request
Header:
Body: (Form URL Encoded)
client_id = singleview-system
client_secret = <client secret>
refresh_token = <refresh_token>
grant_type = refresh_token
Response
200
<pre>{ "access_token": <token> "expires_in": 3600, "refresh_expires_in": 4500, "refresh_token": <refresh_token> "token_type": "Bearer", "not-before-policy": 0, "session_state": "scope": }</pre>

Below are the client_id and client_secret details applicable for various environments,

Environment	Client Id	Client Secret
-------------	-----------	---------------

DEV	singleview-system	
SIT		
UAT		
PRE-PROD		
PROD		

Error Codes

Following are the error codes that are supported,

HTTP Response Code	Description
200	Success Request was successfully authorised and processed. The relevant entities will be returned in response.
201	Created Request was successfully authorised and processed. Creation of the requested entity has been confirmed and will be returned in response.
202	Accepted Request was successfully authorised, but not necessarily been processed. The latest state of the relevant entity will be returned in response.
204	No Content Request was successfully authorised and processed. No response required.
400	Bad Request Request data fails validation or does not conform to expected format.
401	Unauthorised User has not been authenticated.
403	Forbidden User does not have permission to access the requested resource.
404	Not Found Requested resource does not exist or is unavailable.
405	Method Not Allowed Requested operation is not supported.
500	Internal Server Error An unexpected error has occurred within the system.

Error Response
403 <pre>{ "error": "invalid_grant", "error_description": "Access token is expired" }</pre>

API Notifications

1. A callback URL must be registered as a listener in Telflow to send the notification events to the Northbound System.
2. The Northbound System submits a Product Order and receives an acknowledgement that the Product Order had been created with HTTP Code 201. The acknowledgment contains the internal Telflow Product Order Id.
3. During Product Order processing, a notification event of type 'ProductOrderStateChangeNotification' is generated with the latest order status and notified to the Northbound System via the callback URL and expects HTTP Code 200 acknowledging the reception of the notification.
4. A callback URL can optionally be unregistered as a listener using its Id.

5. REST is the supported interface.

Register Listener

URL	https://<host>/tmf-api/productOrderingManagement/v4/hub
METHOD	POST

Request
Header: username: <username> Body: { "callback": <URL> }
Response
200 { "id": <id>, "callback": <URL>, "query": null, "partyFilter": <Party> }

Unregister Listener

URL	https://<host>/tmf-api/productOrderingManagement/v4/hub/<hub-id>
METHOD	DELETE

Request
Header: Query Parameter: <hub-id> Body:
Response
204
